To the attention of the FCC:I have been made aware that the National Association of Broadcasters is attempting to push forward a petition that would prevent me from hearing local Traffic & weather reports on my Satellite Radio. I subscribe to this service, satellite radio, as opposed to local radio which is free and think I should be able to hear whatever programming I like.

The market place will dictate whether or not it is a success or a needed venue. By allowing "N.A.B." to dictate what I hear for a service that I pay for, is as far as I am concerned, a violation of my constitutional rights.

Satellite Radio will not eliminate local radio, it simply gives the listener another venue to hear alternative radio at a nominal price. Local Traffic and weather should be one of those components.

I respectfully ask that you take careful consideration in your ruling and keep something in mind. As a paying subscriber, I should be able to hear whatever venues I so choose, not whatever venues I am told that I can have.

Thank you for your time

Professionally, Mark J. Archuleta
